Course: Tutte

Legend

Item	Description
05	The instructor is clear and effective in explanations.
06	The instructor is able to interact with students.
07	The instructor stimulates interest in the course subject.
08	Teaching aids (lecture notes, slides, articles, etc.) are adequate.
09	Lectures are well organized (contents, program structure, time-table, coherence

STUDENTS OBSERVATIONS - TEACHING ACTIVITIES

ECONOMETRICS 2 (MICROECONOMETRICS)	
FANKHAUSER	
	Pamela is a great professor. However she goes too fast sometimes, again, I think it has to do to the amount of topics she tries to cover. Additionally, I think the slides are overpacked, so rushing + slides with too many info leads to confusion and easily getting lost in lectures.
	Martin is a very motivated TA
	Many times i felt like the explanations were not clear and the answers we asked were not really understood or properly addressed. I think a more precise and calm approach could be appreciated, by focusing only on the harder parts of the problem sets, instead of going through additional harder topics (even though some of them were interesting)
ECONOMETRICS 3	
FANKHAUSER	
	Martin is a very good teacher. However some classes he rushes to cover more material, so sometimes it is very hard to follow the pace of the class.
	Martin has a great way to explain complex things in a simple way, which makes it possible to follow and understand.
	I would suggest Martin to cover only some theory questions without the need to rush over all of them or covering as many of them as possible. Since the exercises have similar logic, solving one or two slowly is enough and even more useful to understand.
	I think in the TA sessions too many exercises were solved so it was hard to follow all of them. I think that having the solutions would strongly help us, so I would prefer if you could publish the solution at the beginning of the class so we do not have to take notes of the solutions, but we can listen and take notes of the explanations.
